PRESENTATION OF THE 5th UFEMAT AWARD

Europe 2020

Nearly zero energy buildings by 2020 Are you ready?

ENERGY EFFICIENCY IN BUILDINGS IN EU COUNTRIES.

Energy efficiency in buildings is an important objective of energy policy and strategy in Europe. Buildings account for nearly 40 percent of final energy consumption (and 36 percent of greenhouse gas emissions).

Moreover, the building sector offers the second largest potential for energy savings after the energy sector itself. Consequently, European legislation has decided on a framework of ambitious targets for achieving high energy performance in buildings.

For the Producers....

do you have the right
products and services
to make the zero-energy
buildings possible?

For the Merchants....

are you ready to give the
necessary added value
to your function in
the building market?
